WELCOME

It is a pleasure to be able to extend to you a welcome to the Second COMPANY FORUM OF THE METAL SECTOR OF ASTURIAS. As in the former venue, in 2008, our main objective is to show the potential of the Asturian companies and of our Region in one of the most dynamic and fast growing sectors in the last few years.

In these pages you will find, laid out, an important example of the potential of the Metal Sector of Asturias and where, in a brief and summarised form, we will inform you about each one of the 60 Asturian companies registered, which will be taking part with stands in the Company Forum, and also a short description of all the Institutions which are constantly working together with the companies in the sector.

So therefore, I would like to point out that among these Institutions which take part in this 2nd Venue, we can include the presence of the Clusters related to the sector –Manuf@cturias, Consorcio Tecnológico de la Energía (Technical Consortium of Energy) and Idesa Technical Consortia– and that they are a formula to push forward and extend practices of innovating and internationalizing among the companies in the sector, with the view to participate in advanced projects working together, which will let them gain a foothold in new markets both national and international.

Among the traditional industrial sectors, the metal sector and its conversions have been, and continue to be, one of the pillars of the Asturian economy.

The metal sector of Asturias is the launching point for the application of the latest technology, of the new processes of production, of new systems of safety at work, of environmental management and of the most up to date management methods, as can be demonstrated in the high number of companies with environmental management systems following the norm ISO 14001.

At present the metal sector provides some 11% of the total Asturian GDP with nearly 1,500 companies (exactly 1,479 in 2008) (a third of the total industrial companies in Asturias) and 30,700 connected jobs in 2008. The amount of business was more than 9,000 million € (in 2008). The volume of exports, over 2,000 million, provided some 65% of total products sent out of Asturias (statistics for 2008).

Therefore, welcome to the Company Forum of the Metal Sector, and welcome to the Principality of Asturias. We sincerely hope that your stay with us will live up to your expectations.

Graciano Torre

Director of Industry and Employment
of the Principality of Asturias

President of ASTUREX

ASTURIAN METAL

For the second time, and continuing the development from 2008, the FORO SECTOR METAL ASTURIAS (ASTURIAN METAL SECTOR FORUM) has been set up.

This FORUM has been developed under the formula of an inverted form of commercial mission, in which, as potential customers and Asturian companies in the sector, you will be able to have working meetings, and get to know the products,

manufacturing processes, technology, quality, delivery deadlines, authorizations, and furthermore, something which gives this type of commercial relationship added value, you will be able to visit the headquarters of the same companies, their production plants, workshops and technical offices, where you will be able to see at firsthand how the companies compare to one another in their demonstration of all the aspects mentioned above.

As future visitors, you will find an Asturian Metal Sector enormously competitive, with the highest level of technology and with the best standards of quality of manufacture as a result of the incorporation of the latest machinery, of the most advanced management systems, of the most recent design programmes, and continuing training of their workforces which results in their high standards of work. To talk of the Metal Sector in Asturias is synonymous to industry. There are few regions in the European Community which can count on such an industrial tradition as the Asturian one, and this can be observed and felt in the idiosyncrasies of our businessmen and women, of the people who work in the sector: one of our greatest

assets, in the attention that the autonomous and local administrations give to this world of industry, in the network of training centres both professional and university and in the technology centres; in the port installations; and in short, in the society in general.

Another feature of our Sector is its diversity in which the whole cycle of activities is complete, which can be seen to go from the transformation of minerals in steel, zinc, or aluminium, going through the capital goods stage, and the shipbuilding, to the more elaborated consumer goods (motorcycles, surgical medical equipment, mechanical stairs, household goods, ventilation systems and a long etcetera), not forgetting the blast furnaces, metallic re-coating, or the manufacture of electric installations, among others. All these products are marketed in non-volatile markets, and on the contrary: in those with a firm base and with a firm establishment in many cases, where at the same time competition is fierce and where it is necessary to be very competitive and have a high level of technology. These are characteristics also fundamental to identifying companies of Metal de Asturias.

Not in vain have we expressed the idea, in numerous occasions from FEMETAL, that the market for the Sector Metal Asturiano is the world, and it is in the conglomeration of the five continents where Metal de Asturias has won a deserved prestige, and where, I am sure, it will continue to make a name for itself with the support of everyone concerned, and very specially thanks to the work of companies in the Sector.

So finally and in the name of FEMETAL, we would like to express our sincere wish that you will visit our region next June 2010, and I would like to give you an advanced welcome, and hope you obtain rewarding and plentiful work, and success in your business ventures.

César Figaredo de la Mora
President of FEMETAL

2º FORO
ASTURIAS METAL SECTOR 2010

PRESENTATION

OBJECTIVE OF FORUM OF METAL SECTOR

- **To show and explain at international level the whole potential and range which the Metal Sector of Asturias possesses** so that agendas can be arranged for personal interviews between the Asturian companies and the international visitors, thus making visits to the main offices of the Asturian companies of the Sector possible whenever requested.

INVERTED BUSINESS MISSION

- 1º In a united enterprise between the organisers of Forum and each of the participant Asturian companies of the Metal Sector, we will identify **potential customers, agents, distributors, expert advisors, etcetera** with those with whom it is hoped to make contact, such as the countries in priority of interest for participant companies.
- 2º **Agendas will be made** for personal interviews between Asturian companies and specific customers.
- 3º Therefore, by taking advantage of the presence of customers in Asturias, it will be possible to arrange **visits to the main offices of Asturian companies of the Sector whenever these are requested.**

PARTICIPANT ASTURIAN COMPANY STANDS

With the aim of giving a physical contact to the development of the Inverted Commercial Mission, an enclosure will be available for Asturian companies of the Metal Sector where business meetings, already fixed in the agenda, can take place.

With this in mind, individual stands will be put up, similar to an office of 4 x 3, with simple and identical furniture, unless any company is interested in having a different size of stand or with their own decoration.

STANDS FOR INSTITUTIONS

In the same enclosure, and with the object of showing the potential of the Sector in Asturias in its entirety, possible contact will be offered with Institutions directly concerned with the Metal, as for example: Centro Tecnológico del Acero y Materiales Metálicos (Centre of Technology for Steel and Metallic Materials), Fundación Prodirtec (Prodirtec Foundation), Autoridad Portuaria de Avilés (Port Authority of Aviles), Escuela Politécnica Superior de Ingeniería Industrial (Higher Polytechnical School of Industrial Engineering), Escuela Universitaria de Ingeniería Técnica Industrial (University School of Technical Industrial Engineering), IDEPA, Asturex, FEMETAL and others.

BUSINESS INFORMATION

COMPANY ACTIVITY

The company is engaged in the manufacture of 3 types of structures:

- **Low cost structures for the agricultural, cattle and industrial sectors.** Moreover, these structures are galvanized and easy to transport, given their simplicity, they can be assembled by the buyer, further lowering the cost of construction
- **Manufacture of curved metal roofing** which can reach a height of 30 metres without any intervening support. This kind of roofing is especially created for buildings which require a special architectural beauty, such as: sports centres, leisure centres, or industrial buildings of high architectural interest
- **Manufacture of conventional metallic structures.**
Moreover, the company has its own engineering technology for these three systems of work

MATERIALS USED

- **Laquered and pre-laquered hot-dipped galvanized steel coils of the highest certified quality**

MAIN PRODUCTS

- **Curved roofing**
- **Traditional doorways/gateways**
- **Low cost traditional doorways/gateways**

BUSINESS INFORMATION

COMPANY ACTIVITY

- **Duro Felguera is a company group specializing in the execution of turnkey projects for the energy and industrial sector, as well as providing specialized services for industry and the manufacture of capital goods**

SUBCONTRACTING ACTIVITIES

- **All activity related to the company**

MAIN PRODUCTS

- **Duro Felguera develops integrated projects for electric power stations, mainly for gas-fired combined cycle plants, industrial plants and fuel storage facilities. The company carries out the complete project process: engineering, procurement, construction, erection, commissioning, operation and maintenance**
- **In the area of the services, Duro Felguera is specialized in the erection of energy-related and industrial facilities, as well as in its operation and maintenance services**
- **In the field of manufacture, Duro Felguera specializes in equipment for refineries, chemical and petrochemical plants and off-shore equipment; components for wind farms; rail track equipment, tunnel boring machines and equipment for large laboratories and research centers, among other industrial facilities**

BUSINESS INFORMATION

COMPANY ACTIVITY

- **Manufacturing of: capital goods, mechanical structures, pressure vessels, machining components, machining boiler making works**

SUBCONTRACTING ACTIVITIES

- **Rough cut milling**
(welding, boiler making works, stainless steel mechanical welding, assembly of units and subunits)
- **Machining with smooth cut finish**
(turning, drilling, rolling, gang drilling, assembly of units and subunits)

MATERIALS USED

- **Carbon and stainless steel, duplex, bronze**

MAIN PRODUCTS

- **Hydraulics: Finished turbines for hydraulic plants -Francis, Kaplan, Bulbo and Pelton-. Collectors, injectors, and spiral cameras. Spherical disc valves, butterfly valves, ring jet valves (Howell Bunger). First distributors, discharge rings, vacuuming equipment, cones and L shaped joints. Driving vanes, forged and welded. Sluiceways, caissons, grilles for power stations. Stainless steel tanks**
- **Wind power: Anchors, extensions for diggers, Gondola chassis**
- **Tunnelling equipment: Bearings for tunnel boring machines, tanks**
- **Nuclear power stations: Driver bearings for pump shafts**
- **Petrochemical: Tanks and casings for pumps in stainless steel and duplex**
- **Mining: Ball mills, hoppers, tanks and bedplates**

BUSINESS INFORMATION

COMPANY ACTIVITY

Manufacture of capital goods in the field of:

- Industrial Electromagnetism
- Industrial Magnetism
- Cleansing, concentrating and purifying of minerals
- Industrial magnets
- Magnetic separation of metals
- Magnetic elevation of ferrous materials

MATERIALS USED

- Stainless steel, manganese steel, iron, aluminium, copper, ferrita magnets, neodium magnets, alnico magnets, electrical material

MAIN PRODUCTS

- Electromagnet lifts :circular, rectangular, bipolar y tripolar
- Electropermanents for lifting: rectangular, bipolar and tripolar
- Electromagnets for automatic and manual cleaning
- Separators for permanent magnets of automatic and manual cleaning
- Electromagnetic separators for high intensity rotary induced
- Magnetic separators for high intensity permanent Neodimium magnets
- Magnetic head drum separators rotary sweeping
- Magnetic grills: self-cleaning and manual
- Non-ferrous metal separators with eccentric rotor
- Refridgerating liquid separators

BUSINESS INFORMATION

COMPANY ACTIVITY

- **Manufacture of cylinders for iron and steel lamination produced by static metal casting or centrifuged in iron smelting**

SUBCONTRACTING ACTIVITIES

- **Can be subcontracted to a third party: thermal treatment and minor works of machining**
- **Also the manufacture of rollers of small size by mono-block forging**

MATERIALS USED

- **Scrap metal high purity iron ingots, iron alloying (femo, feva, ni, fecr, fesi, etc.), Forged products (rings and screws) silicon sand, molding materials (bentonite, zirconium sand etc), refractoring, prefabricated concrete for molding, cutting tools and abrasives for machining hard and ultra hard (plaques, cutters, discs etc.), metallic molds and cases for molding, ladles for metal in blast furnaces**

MAIN PRODUCTS

- **Cylinders (rollers) for laminating in bi-metallics and monoblocks for centrifugal or static casting for use in iron/steel industry**
- **Also for other uses of laminating (rubber ,zinc, etc.) And possibility of casting pieces forged to order up to 40 tms and 15 mts. long**

ACTIVITY INFORMATION

SOCIAL PURPOSES

The IDEPA (**Economical Development Institute of Asturias**) is the public entity dependent on the Asturian Regional Administration, whose mission statement is to favour the economical growth and to create employment in the region through the support and dinamization of the business activity.

SERVICIOS

It offers to businessmen and entrepreneurs services developed to:

- **Favor the productive investment and the creation of new industrial enterprises and companies that offer services associated to the Industry.**
- **Improve the companies' competitiveness, promoting investigation, development and innovation as the basis for new productive activities and high added value processes.**
- **Increase the presence of Asturian companies in foreign markets.**
- **Promote the cooperation among companies and/or Institutions in order to favor business opportunities and increase the companies' competitiveness.**
- **Facilitate the creation and improve industrial infrastructures of the Principado as a strategic element for economical development.**

Alberto Robles (General Manager)

ACTIVITY INFORMATION

SOCIAL PURPOSES

ASTUREX (Principado de Asturias Foreign Promotion Society, Inc) was born from the union of all the Asturian social agents involved in the business internationalization. Therefore it has amongst its shareholders, not only the Asturian Government but also the Asturian federation of entrepreneurs and the Oviedo, Gijón and Avilés Chambers of Commerce, as well as the Cajastur financial establishment. Thus, its mission is to integrate, in a fast and efficient way, the support services for the direct foreign promotion of the Asturian companies in cooperation with the technical tools related to Foreign Trade from all of its members

OBJETIVES

ASTUREX framework contains the following general objectives:

- **To consolidate and increase the number of exporting companies, with a special effort to help SMEs (small and medium size companies)**
- **Promoting the cooperation among companies for their internationalization.**
- **Increasing the exports of new sectors and/or products**
- **Promoting and giving an incentive to the exports of new sectors and/or products**
- **Strengthening the exports to new markets**

PERSON TO CONTACT/POST

Alberto González Menéndez (Secretary General)

ACTIVITY INFORMATION

The Asturian federation of Employers **Federación Asturiana de Empresarios (FADE)** is the entity that represents the interests of employers within the Principado de Asturias. Nowadays it consists of **almost 100 employer associations, territorially and by sector**, which also includes about 40,000 companies within the Asturian territory. At the same time, 40 big companies established in Asturias take part directly in **FADE** under the category of singular companies because of their activity, sales volume, staff or social relevance.

It works in a regional level, as **representative for the CEOE** (Spanish Confederation of Business Organizations) and for the **CEPYME** (Spanish Confederation of medium and small size companies).

SOCIAL PURPOSES

- **Defending the Asturian employers' interests, contributing to the economical growth and social welfare**
- **Promoting the creation of an environment favourable to the Asturian business activity**
- **Working as a channel for the dialogue between the employers and other political powers such as the Government, Public Administrations, Unions, etc**
- **Carrying out a steady following of the economical and social activity in Asturias, in order to propose solutions that facilitate an increase in the companies' competitiveness**

SERVICES

- **Training, European projects, information about grants and subsidy, support for technological research, development and innovation, international advising, labour risk management and prevention, business consolidation, connection to internet and domain management, computer bulletin for employers, press journal, associations, promotions and agreements office, tax and labour law consulting office**

PERSON TO CONTACT/POST

Elvira Fernández Alonso (Head of Marketing Division)

ACTIVITY INFORMATION

The **Port of Aviles** is situated on the Southern point of the Atlantic Arc in the **North of Spain**, in the centre point of the Cantabrian coast.

It has infrastructures which contain integrated technology of information, allowing customers to gain ready access, both effectively and potentially, in a rapid and efficient way, which has lead to **movements of 4 million tonnes in 2009**, divided into 30% of general merchandise, and 60% dry bulk and 10% of liquid bulk.

The Port of Aviles has **six loading bays, two of which are private and the others public**. All have various possible uses: industrial, commercial and fishing.

The six different bays which are contained in the Port of Aviles have **terminals for solid and liquid bulk, and for general merchandise**, connected to its distribution area with a privileged accessibility: both by road and rail and with the Airport of Asturias close by. It has therefore excellent inland communication systems. It also possesses an internal rail service with connections to the main national railway network.

The Port **boasts of a 24 hour service of pilots, tugs ,and mooring, 365 days of the year**.

Due to its location as an estuary port, and already having been developed on the left bank, also due to an increase of traffic and the demand for more space for a logistic development, the Port Authority began work for harbour **development on the right hand bank in 2008, with the construction of 1800 linear metres of quays of 14 metres of draft** thus preparing for the challenges of the future.

Jorge Orejas Pérez (Business Division Leader)

INTERESTING FACTS

The Port of Gijon is situated in the North of Spain, in the centre of the Cantabrian coast, at the South corner of the Atlantic Arc.

It is one of the main ports of Spain due to the tradition of the energy industry in the area providing more than 10% of the GDP in Asturias and moving, on average, more than 20 million Metric tonnes a year. It therefore has an important commitment for services to the companies of the Port Authority (la Comunidad Portuaria) in its hinterland, where a significant number of companies from the metal sector operate, from small and medium-sized firms to large international corporations (ArcelorMittal, ThyssenKrupp, Duro Felguera, etc).

At the present time its **regular shipping lines of containers connect Gijon with more than 250 ports world-wide**, offering import/export business opportunities of great interest for companies.

The 245 hectares of port area take in **numerous terminals of solid and liquid bulk, and general merchandise.** All the loading bays are integrally connected to the railway service: the port of Gijon being where the rail system is most used for moving commercial goods. Besides this, the proximity of the national motorway network means that road transport is ideally suited.

Added to this, **the port of Gijon is the natural outlet for import/export merchandise for Castilla and León**, the most extensive region in the European Union.

The 400 Hectares of the Logistic and Industrial Activities Zone of Asturias (ZALIA) -next to the port installations - and the extension of the Port of Gijon, already in an advanced stage, will offer **new possibilities for business** for companies in the forthcoming years.

ACTIVITY INFORMATION

PRESENTATION

Technical Consortia Ides AIE (AIE ITC) is an initiative led by the **European Design and Engineering Company, Ltd. (IDESIA)** to continue and upgrade the industrial development of IDESA in their area of activity, the manufacture of goods

For this reason it has been decided to consolidate and develop the Innovative Business Group (cluster) formed by a group of leading technological companies in the metal working sector in order to provide a comprehensive response to the demand for any product directed at different sectors of industrial activity or construction, contributing to the industrial transformation and all the added value required

ACTIVITIES

- **Expansion of the participation in the value Chain, extending this to both pre and post production activities**
- **Carrying out joint actions of cooperation in areas such as customer acquisition, purchasing from suppliers, training or support in management tasks, production, inspection, specialization, etc**
- **Establish quick and rational procedures for a correct processing of orders**

ACTIVITY INFORMATION

PRESENTATION

MANUF@CTURIAS is a regional initiative of the European Technology Platform Manufacture. Created in Asturias by different entities in the public and private sectors, aims **to promote the renewal, revitalization and restructuring of traditional industries through a strategy based on research and innovation.**

The platform started operations in the year 2006, in the form of the Regional Technology Platform, which is now operational and **consists of a total of 98 institutions, industrial companies, industrial services and administrative agencies, R&D centres and Universities**

In this sense, in the year 2007, the opportunity arose for the most proactive group of the Platform, sponsored by the minister of Industry, Tourism and Trade, to join the Innovative Business Group, so that in March 2008 it became MANUFACTURIAS AEI as the **Economic Interest Grouping (AIE) through registration as members of 28 entities: 27 companies and a Technology Centre.**

The business group formed around the manufacturing sector in Asturias, has its main objective to contribute to the growth and expansion of its members, through the adoption of collaborative strategies **to promote research, the implementation of new technologies, and the implementation of innovations** within the scope of their business, to increase productivity and improve competitiveness.
